

## **Jewellery passes and diamond certificates out of the label printer**

### **Economically priced card labels with individual look for marking in the label printer**

Birkenfeld, November 2016. Owners of a traditional thermal transfer label printer can print jewellery passes or precious stone certificates in business card format themselves with the new card labels by eXtra4 Labelling Systems. The label manufacturer and identification specialist from Birkenfeld near Pforzheim provides for the representative front of the individual documents by cost-effective digital printing in brilliant colours.

### **Printing in the label printer**

For the marking of specific data of jewels or gemstones the card labels need no more than the thermal transfer printer which is available for the price-marking of labels anyway. Card labels consist of a plastic material composite and are endlessly made up on rolls. Thanks to fine micro perforation, they can easily be detached from the track after printing.

### **Pre-printed forms in digital printing**

The front of jewellery pass or gemstone certificate shows the individual company logo in brilliant colours. By means of digital printing the "business cards" can be pre-printed from the roll starting

from 250 pieces in a photo-realistic quality. With their matt-finished surface and the handy format of 85 x 54 mm, the cards have the right feel in the hand. "Look and feel" of the passes and certificates can easily match against plastic cards from the card printer – and this without any additional investment.
